Evolutions of Promoting Committee of the "Protocollo ITACA"

Promoting Commitee of the "Protocollo ITACA" is a national body whose main objective, since 2013, is the promotion and dissemination of the principles of environmental sustainability of buildings through the ITACA Evaluation Protocol.

Committee Members:

ing. Giuseppe Iiritano (Calabria Region), PRESIDENT since December 2018

ing. Giovanni Di Bello (Basilicata Region)

ing. Massimo Sbriscia (Marche Region)

REGIONE MARCHE

ITACA
Istituto per l'innovazione e trasparenza degli appalti e la compatibilità ambientale

Evolutions of Promoting Committee of the "Protocollo ITACA"

It is our intention to change and evolve the Committee's perspectives to strengthen its identity and make the scope of action on the territory and with the institutions more widespread and effective, for the greater dissemination of the Protocol:

- involving sector operators: technicians, architects, engineers
- providing assistance to public administrations that intend to have a certification system in line with national directives

Evolutions of Promoting Committee of the "Protocollo ITACA"

The Committee wants to promote and spread the principles of environmental sustainability through the awareness of the advantages and prospects for improvement, of the built environment, in the medium and long term; giving the necessary support for the creation and launch of structured processes for building performance certification.

The main objective is the creation of a single certification system, public and shared

Future Perspectives

Important collaborations have been started with the National Councils of Engineers and Architects, UNI, and with other bodies for the training of technicians and professionals on common themes, expanding the knowledge and skills of the operators and looking for a common strategy to standardize the assessment and certification system.

Future Perspectives

Since December 2018, ITACA has initiated two important collaborations:

with

- The National Council of Architects, Planners, Landscapers and Conservators (**CNAPPC**)
- The National Engineers Council (**CNI**)
- **UNI** - Italian National Unification Body

and with the South Tyrol Energy Agency - **CasaClima**

Future Perspectives

Memorandum of Understanding with CNAPPC, CNI and UNI

Targets:

- Create a work group that prepares ad hoc training plans, to meet the needs of technicians, professionals and operators in the sector;
- implement the training plan aimed at its members in order to spread the knowledge and application of the UNI PdR 13:2019. The training plan will be articulated on two levels: modules for basic training and modules for specialized training, provided also using e-learning tools for online learning;
- planning and organization of joint technical-professional initiatives (seminars, conferences, workshops, etc.)

Future Perspectives

Memorandum of Understandig with CasaClima Agency

Targets:

- definition of shared procedures to carry out assessments with the ITACA or CasaClima protocol and achieve consistent and comparable results. Developing a detailed technical comparison between the CasaClima Nature and ITACA protocols to define a methodology that allows to compare the certifications performed with the two evaluation methods;
- **build a totally public single system of the Regions**. Cooperating in the evolution of the two protocols to uniform single indicators and to develop new ones, aiming at the drafting of a new joint energy and environmental protocol promoted in co-branding to cover the "Minimum environmental criteria" (CAM) and to support public administrations;

REGIONE MARCHE

ITACA
Istituto per l'innovazione e trasparenza degli appalti e la compatibilità ambientale

Future Perspectives

Memorandum of Understandig with CasaClima Agency

Targets:

- refresher courses for ITACA designers and CasaClima consultants, for mutual recognition of skills;
- definition of a complete and common training course for technicians who do not have ITACA or CasaClima training, having as object the two protocols and the joint application methods. In fact, the dissemination of the evaluation method involves the sharing of processes, including decision-making processes, with the subjects who will then have to apply it, in particular with professionals.

Future Perspectives

Sustainability in Italian legislation

These activities will be fully completed on the national territory, when the project to revise the Consolidated Law on Buildings, Presidential Decree 380/01, which introduces the new Part III on environmental sustainability of buildings, will be completed.
The intention is to induce designers to consider the effects on the environment when designing any work that impacts on the territory.
Evaluating the work starting from the construction phase, to arrive at the time of its eventual demolition or disposal.
The introduction of these aspects is a significant innovation in line with European provisions and with the commitments made with the signing of the 2030 Agenda for Sustainable Development.
