LC Districts Online Study Visit in Marche Region

N.1 overall event including both study visits.

Week 40	Week 41	Week 42	Week 43	Week 44
Information on: GP1 - ITACA Protocol GP2 - Joint SECAP	Study and analysis of information and with stakeholders		Study Meeting + Peer review	(peer review elaborations and final results)
From 28 Sept	from 5 Oct		22 October	from 26 Oct
to 2 Oct		to 16 Oct	10.00 - 13.15	to 30 Oct

GP1
Protocollo ITACA for buildings and at Urban Scale

We preferred to present 2 protocollo ITACA subdivided in 2 different factsheets to better understand the 2 possible approachs at different scale for the same topic: certifie the sustainability of buildings and “districts” to better evaluate the environmental performances of single buildings, blocks or urban districts.

1. Protocollo ITACA is tailored for buildings, the analysis leads to a quality certification officially approved by UNI as PdR 13/2019 and respects EU and National legal framework;

2. Protocollo ITACA Urbano is tailored for masterplans, at Urban scale. At the moment is under evaluation, the aim is to complete the same path and have the possibility to chose one or another.

LC Districts deals about Low Carbon Districts, the districts could be intended not as a simple sum of buildings, but the best approach could be to take in account of single buildings certificated but also the entire blocks, or quarter, or urban district in account.

GP2
Joint SEAP

It refers to a plan carried out collectively by a group of neighbouring towns, allowing them to achieve more effective results than isolated ones. Opportunities for high-impact actions can be more easily identified, targeting relevant sectors such as energy efficiency for public//private buildings, public transport, etc.

11 small local authorities, coordinated by SVIM and CIS, shared commitments in climate action under the framework of the Covenant of Mayors.

They have been engaged in developing their joint SEAP - foreseeing a shared CO2 reduction commitment by at least 40% by 2030 - building a common vision, defining an emission inventory, assessing climate impacts and defining a set of actions to be implemented both individually and jointly in the short-medium-long terms.

Main stakeholders are identified for each actions (i.e. NGOs, private companies, regional public authorities, etc.).

Main beneficiaries: local authorities, vulnerable groups, private sector.
