- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Si tratta di un rilievo montuoso del settore collinare marchigiano costituito da rocce argillose e marnose.

4.2 Quality and importance

I boschi di caducifoglie dell'Ascensione meritano di essere conservati anche per la presenza di agrifoglio. Il sito è sottoposto alle influenze mitigatrici del litorale marino e alle influenze montane: tali influenze si ripercuotono sulla composizione floristica dell'area.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site
